Traverse Master Mobile Shop Floor

Traverse Master Mobile Technology gives you the power to do business in the palm of your hand. The solution allows you to: quickly receive jobs, consume materials, track locations and job status, enter time and document inspection results. Managing your shop floor has never been easier or more efficient.

Advantages of using Traverse Mobile Shop Floor:

- User-friendly interface
- Improve data accuracy and reduce duplicate data entry
- Gain real-time visibility
- Accurately track job costs
- Enhance customer service experience
- Effective inventory control management
- Insightful reporting

Master’s Service Repair ERP solution and mobile Shop Floor functionally provides superior shop floor control allowing you to take charge of your business.

Optional Mobile Functions

- Receive Jobs
- Picture Management
- Enter Material Charges
- Track Equipment Locations
- Remote Time Entry
- QA / Inspection Checklist
- Delivery Receipts
**Material Charges**

Easily consume materials on the shop floor when they are used for a job. This quick entry function allows you to scan, lookup, or select from a list of items associated with your estimate to immediately associate materials with jobs. Inventory is consumed, WIP updated, and actual costs are applied to your jobs when they occur instead of when someone in the office has time to enter data into your system.

**Receive Jobs on Shop Floor**

Quickly receive jobs when they arrive at your shop. A user-friendly interface with lookups allows you to enter the information required to create a job on the shop floor, including nameplate data.

Job numbers are automatically assigned, eliminating the need to manually update job receiving logs.

**Picture Management**

Mobile Shop Floor functionality allows you to capture and edit pictures during job entry. If desired, a list of required pictures are presented to your staff reminding them which photos are necessary based on the type of job received. Pictures are automatically saved to your job folder.

**Mobile Time Clock**

Track time on the shop floor or in the field with Traverse Master Mobile Time Clock. Easily manage multiple jobs or labor codes simultaneously, review employee activity and update jobs when complete.

Using our disconnected mode allows you to track time in the field when not connected to the server. A synchronize option updates your server when reconnected.

**QA Configurator / Inspection Checklist**

Use QA Configurator to guide your staff through step-by-step instructions for QA and/or inspection checklists. Create an unlimited number of questions and answer combinations, set variances, defaults, and selection lists to help ensure accurate recording of data.

Pictures, help text, and an unlimited number of media links guide your staff to properly accomplish QA and inspection checklists.

**Job Location Tracking**

Easily identify where equipment or jobs are physically located on your shop floor. Simply scan the job or equipment label and bin location to record in Traverse Master where the item is located. Real-time activity related to the job will display when a job is scanned.

**Delivery Receipts**

Recording acceptance of job delivery is easy with the Delivery Receipt function. Obtain customer sign-off on a job that includes the delivery date, time, name, and signature of the person approving delivery acceptance. Once saved, a PDF copy is stored in the transaction job folder. Additionally, an optional mobile printer can be used to allow for printing of a hard copy customer receipt.
