Transaction Payment System

Integrated Credit Card Processing

OSAS

Open Systems Adaptable Solutions

Transaction Payment System (TPS) is future-proof payment processing made smarter, faster, and easier with a fully integrated, PCI-compliant, and certified method for the utilization of credit cards.
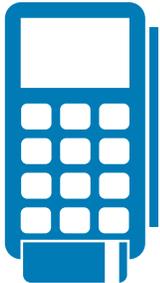

As customers move away from cash and check transactions, credit card payments are a staple for almost every business. Does your company offer credit card payment options for your customers? If the answer is no, now is the time to take advantage of Open System's solution to boost customer service and get paid faster with built-in credit card processing options. We provide the tools to streamline your payments and maximize the features of your ERP software. Together with our Certified Partners providing "industry best" solutions, we work to seamlessly integrate with payment processing software – improving your services while protecting your clients.

TPS enables you to start accepting secure credit card payments today for these types of transactions:

- AR cash receipts
- Sales Orders
- Work Orders
- Project Costing Deposits and Billings

- EMV chip and Magnetic
- Signature Capture
- Receipt Printing
- Process, void, or pre-authorize credit card payments

Why invest in an integrated solution?

- Decreases manual and duplicate entry

- Reduces errors

- Increases employee productivity and accuracy

- Eliminates arduous and unnecessary paperwork

- Streamlines business processes

- Improves customer relationships

- Increases cash flow

- Lowers labor costs

- Saves time

- Provides a stable credit card processing solution

Convenience

Stay one step ahead of the competition by offering the convenience of using credit/debit cards as payment for your company's goods and services. Whether completing transactions at a computer terminal, in-store, Point of Sale (POS), eCommerce, app or mobile device, you'll get a fast and reliable partner to keep vendors and customers happy. Integration of your ERP software with one of our reliable turnkey credit card processing solutions allows your company to complete transactions wherever or whenever your business requires – quickly and more simply.

Accuracy and Profitability

Integrated technology allows you to get transactions right the first time by partnering your ERP software with a payment processing solution. You'll avoid chargebacks by reducing duplicate transaction input errors and the risk of incorrectly entered amounts. Quicker transactions shorten lines and allow you to serve more customers – capturing more revenue. Integration with your software allows you to perform simple reconciliation, reduce your duplicate accounting efforts, and save employees time

Security

Data breaches and compromised consumer information make headlines with increasing frequency. You want to ensure that your company maintains protections against lost business, legal action, and the costs associated with security lapses. Our secure solution protects your business by remaining compliant with Payment Card Industry Data Security Standard (PCI-DSS) which requires that any company intending to accept credit card payments, store, process, or transmit cardholder data needs to host their data securely with a PCI compliant hosting provider. Our Certified Partners provide this protection against fraud and retain all information, eliminating the need to store any sensitive account information for external payments in your ERP software solution.

Our integrated security measures include the following:

- Customer data protection at the point of purchase, through the transmission of data, and when information is stored

- Utilization of point-to-point Encryption and Tokenization when sending sensitive client data such as card numbers

- Provision of Europay, Mastercard, and Visa (EMV) protection. EMV chip technology produces a unique code each time it is used vs. a magnetic strip holding a static amount of data making it easier for criminals to skim your card and use the data to create their own

- Secure support in both card present and card-absent environments

- Multipronged fraud-reducing approach

- We realize the importance of the safety and security of sensitive information for both your company and your customers and TPS ensures identity and transaction safety protection for your business.

Benefits of integrated credit card processing

- Save time/staff expense by reducing the need for duplicate entry

- Current and reliable reports of cash-flow

- Increased company financial visibility

- Elimination of human error due to manual entry

- Best practice utilization

- Workflow improvement

- Increased information / data security

- Quicker payment processing

- Greater customer satisfaction

- Reduced invoicing costs

- Easy and continual access

TPS provides certified partnerships with the following so you can choose which works best for your company:

OpenEdge through Global Payments

Vantiv through Worldpay

Cayan through Global Payments Integrated

Give your company a competitive advantage by implementing a reliable, secure, and fully-integrated solution from OSAS that unites your credit card processing with your ERP software. You'll be investing in a smart solution that provides a partnership to implement a safe and complete credit card processing solution for any type of business.
